

GCK-01 Guard Tour / Data Acquisition Kit

FEATURES

The DigiTool Guard Tour/Data Acquisition System can be used in a variety of applications including guard patrol monitoring, health and safety record keeping, remote time recording, maintenance control, and more.

The Location Tag and Event Book incorporate waterproof ID memory button(s) from Dallas Semiconductors USA. As each button contains a unique serial number they are registered into the DigiTool Lite Software's database via a location tag reader on the GC-02 Base Station.

The buttons in the location tags are associated with the name of sites to be visited/ the equipment to be checked and the Event buttons are associated with pre-defined real time events. The reader can then be used to read up to 8000 location tags/event buttons.

As each button is read, the reader date time stamps every transaction so that a full audit trail can be created. This information can then be downloaded via the GC-02 Base Station into the DigiTool Lite software for reporting purposes. It can also be exported to other systems for analysis, e.g. for time recording applications.

Guard Tour
